

Data Sheet

Software Licensing

The most advanced solution for online data backup and recovery from EVault and United Computer Group, Inc.

Key Benefits

- Customer controlled environment
- Reliable disk-to-disk process
- End-to-end data security
- Automated, scalable deployment
- Regulatory compliance
- Assured disaster recovery hot backups, deduplicate
- Broad platform support
- Easy data center and network edge protection

Software licensing from EVault and United Computer Group is a proven, reliable, disk-to-disk backup and recovery solution trusted by customers globally to protect mission-critical data and to keep their businesses running. Advanced patented technology ensures that you can securely protect a growing, heterogeneous and geographically dispersed network using one simple solution.

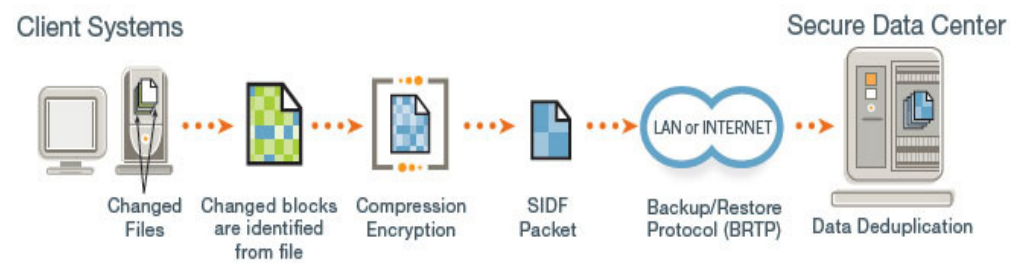

Ensured data availability and recoverability

EVault Software assures that you can meet your growing business and regulatory demands for data availability and recoverability. There's broad support for operating systems and platforms, and it's easy to back up and recover critical data within individual databases, mailboxes, or cluster nodes, using EVault plug-ins for Microsoft Exchange, Microsoft SQL Server, Microsoft SharePoint, Microsoft Cluster Services, and Oracle. EVault Software's SinglePass technology rebuilds backups dynamically, so there's no need to restore from multiple incremental backups.

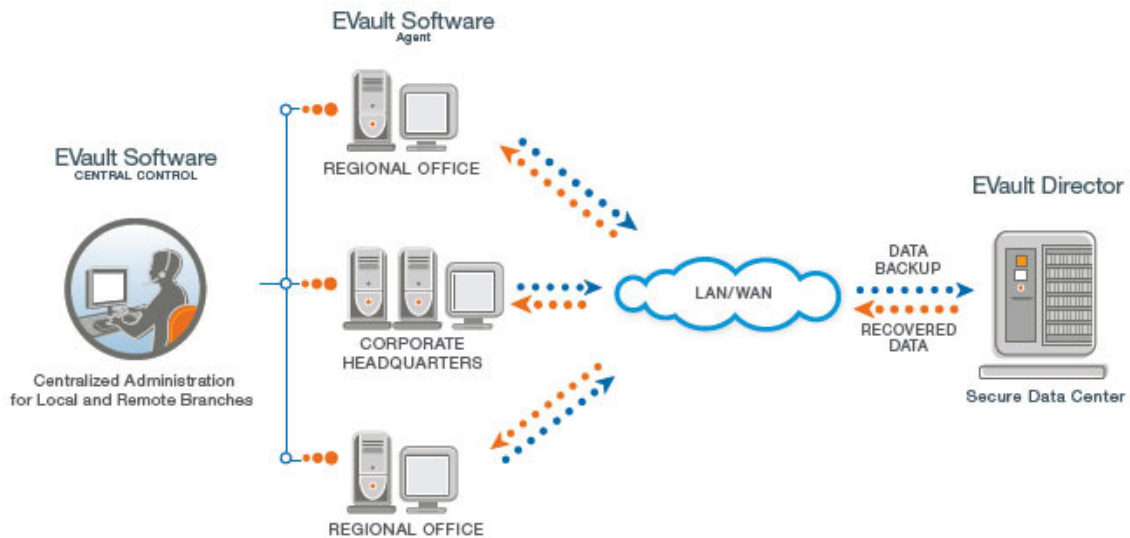

Scalable and efficient

EVault software readily scales to accommodate your company's growth, and provides a compelling ROI. You can easily and efficiently manage multiple terabytes of backup data. EVault DeltaPro™ technology speeds your backup operations and dramatically reduces storage costs by backing up only new and changed data blocks. All data is compressed using EVault's patent-pending Adaptive Compression before being transferred, dramatically reducing your storage footprint and backup windows. Data deduplication decreases this further by eliminating duplicate data within storage. Open files are backed up seamlessly, and variable bandwidth throttling ensures protection without interrupting operations.

DeltaPro™ technology

Tapeless solution reduces risk

EVault Software centralizes the backup and recovery of all computers distributed throughout an organization - local and remote.

End-to-end data security

Data is encrypted before and during over-the-wire transmission, and remains encrypted in storage. During restores, decryption occurs only when the encryption key holder enters the correct passcode. There are no “back door” decryption keys.

Web-based centralized management for distributed environments

EVault Software simplifies data protection across networks, including remote offices. You manage and monitor your backups through

Compliance with industry and corporate governance requirements

Broad platform support

You can use EVault Software in nearly any combination of platforms and applications including Windows, Novell NetWare, Linux, Sun Solaris, HP-UX, IBM AIX, IBM System I, VMare, Microsoft SharePoint, Microsoft Exchange, Microsoft SQL Server, Microsoft Cluster Services, and Oracle. This is not only easy, but cost-effective: A single solution unifies data protection across your entire enterprise.

IBM System I (AS/400): *Features and Benefits*

Feature	Benefit
Support for hot or cold backups	Support for both hot and cold backups, including “Save while active,” Ensuring critical data can be protected without taking systems offline.
Complete DR protections of the system	The System i Agent protects system data, native DB2 databases and IFS files and folders to allow complete disaster recovery of System i.
End-to-end data security	Backup data is encrypted in transit and while in storage on the Vault with AES encryption to ensure security of your sensitive data.
Advanced DB2 compression	Efficient algorithms compress the data by a factor of 10:1 allowing faster backups and restores as well as a reduction in storage needs on EVault Director Vaults.
Concurrent LPARs backups	Concurrent and parallel backups and restores of LPARs reduce the management and cost of the backup solution while improving performance
Easy-to-use interface	System i administrators will find an intuitive console to easily manage backup and recovery

Microsoft Enterprise/Standard Certified: *Features and Benefits*

Feature	Benefit
Manageability	EVault simplifies your organization’s ability to manage its data protection environment. You easily manage your environment from a web console anywhere, anytime.
Compatibility	Microsoft certification validates EVault’s seamless integration with your most important platform and applications.
Reliability	Using reliable and efficient disk-to-disk technology. EVault protects your Microsoft environment without compromising system performance.
Interoperability	EVault’s native application support ensures business critical applications and server are protected.
Security	EVault SaaS complies with all Microsoft security requirements. You can rest assured that your data is safe with EVault.
Application Integration	Enables seamless interoperability with important applications such as Exchange, SQL server, Microsoft Cluster Services, and Oracle.
Bandwidth Throttling	Minimizes impact on other applications during backup window to maintain specific quality of service.
Industry-leading OS Support	Cost-effectively protects multiple platforms and applications, including Windows, NetWare, Linux, Solaris, HP-UX, IBM AIX, and IBM iSeries.

About United Computer Group, Inc.

United Computer Group, Inc. is the technology solutions company that delivers tools, knowledge and value to enable our customers to perform at their best.

Founded in 1987, UCG is an IBM Advanced Business Partner that specializes in IBM iSeries Servers, Peripherals & Services. UCG has served 550+ Fortune 500 and SMB clients throughout the United States.

United Computer Group's services include: iSeries Migrations, OS/400 Version Upgrades, IBM Hardware/Software Maintenance Agreements, SCON - Server Consolidation, LPAR - Logical Partitioning, iSeries Windows and Linux Integration, and Leasing.

VAULT400 is a private-labeled license solution from United Computer Group, Inc. VAULT400 is a SaaS (managed service) for System i users as well as Windows, Oracle, SQL, and AIX users created by United Computer Group, Inc.

VAULT400 provides backup solutions for an entire organization's business-critical data. Options from 10GB to 100TB+ are available in a variety of solutions: SaaS (Managed Services), Appliances (Plug-n-Protect), and Software Licensing. Call UCG today to discuss your requirements.
