

Enterprise strength disaster recovery for IBM i

Maxava offers High Availability software that uses the full native functionality of the IBM i operating system. Maxava HA Suite provides real-time replication, unlimited concurrent apply processes, constant data checking, easy to use GUI and remote monitoring and management from a mobile device.

Whether you operate a Fortune 500 enterprise or a small business, whether you are ensuring business continuity for packaged or home-developed IBM i applications, Maxava has a solution for you. Cost effective and scalable, the Maxava HA Suite provides the highest levels of usability, performance and readiness.

Simple to Use

- Intuitive GUI and green screen facilitates daily management in minutes
- Remote or on site installation saves time and costs
- Mobile device support allows you to monitor and manage your HA Solution from anywhere*

High Performance Replication

- Uses 100% native IBM i Remote Journaling for highly efficient replication that reduces the load on the production server
- Unlimited concurrent apply processes easily process high transaction volumes and minimize replication latency

Always Role Swap Ready

- Easily see the replication synchronization status via the GUI or green screen interfaces
- Constant data checking ensures data integrity
- Self-healing technology detects and fixes issues automatically

* depends on Maxava HA solution selected

Maxava produces the world's premier business continuity and replication products for IBM i. Our performance levels have been proven in the toughest environments for the most demanding clients.

Maxava supports a global client base directly and via a network of strategic alliances and partnerships. Maxava is dedicated to IBM i, and focused on delivering the highest service levels to IBM i customers across all major industries.

MAXAVA HIGH AVAILABILITY SUITE

Maxava HA™ **ENTERPRISE+**

Maxava HA Enterprise+ offers the most comprehensive high availability and disaster recovery readiness for an IBM i application. Designed for complex environments and for organizations serious about their business continuity, Enterprise+ includes all the functionality of SMB plus advanced replication, monitoring tools and maxView Manager - the ultimate in remote monitoring and management, with the ability to perform a role swap from a mobile device.

Maxava HA™ **SMB**

Maxava HA SMB provides cost effective High Availability to protect your IBM i business critical applications and data. It incorporates advanced autonomies, and offers enhanced auditing and user administration tools.

Maxava HA™ **DATA STREAM**

Maxava HA Data Stream is a highly efficient data replication solution that ensures business critical data is backed up in real time and fully recoverable.

maxView™

Access Maxava HA and key IBM i system resource information – anywhere, anytime, from a remote web device.

maxView Manager; monitor and manage key features of your Maxava HA Enterprise+ and IBM i environment remotely and in real time from a web access device.

maxView Monitor; monitor your Maxava HA SMB environment and easily check and report on HA readiness and key IBM i system resources.

maxView Lite; easily check on common IBM i system information in real-time.

“

For the police it's handcuffs, a nightstick and firearm. For disaster recovery we use Maxava.”
