

Data Sheet

EVault Plug-n-Protect

An all-in-one backup and recovery appliance for fast and economical deployment of a complete data protection solution

Key Benefits

- Save up to two weeks during procurement, setup and configuration
- Get more protection for your dollar
- Protect any combination of platforms and applications with leading EVault Software
- Recover a failed system using built-in EVault System Restore
- Minimize potential data loss with EVault Real Time Protection
- Eliminate the hassle of contracting multiple vendors for support

Buying components separately and creating your own backup and recovery solution can take a lot of time, resources, and expense. Deploy EVault Plug-n-Protect and much of the work has been done for you. EVault Plug-n-Protect is an all-in-one backup and recovery appliance consisting of pre-configured hardware and storage, plus a complete suite of EVault products – for the fastest path to comprehensive data protection.

More Value at Lower Cost

EVault Plug-n-Protect gives organizations an affordable way to protect their critical systems and data. By packaging all of the components together into one complete solution, you can not only save on upfront costs, but also save time associated with procurement, setup, configuration, and deployment. And once EVault Plug-n-Protect is up and running, you can continue to enjoy savings by consolidating resources and streamlining backup operations. The solution can be easily managed via EVault CentralControl, an intuitive, Web-based console that allows you to configure backup jobs and retentions, and initiate restores across your organization from one central interface.

Powered by EVault Software

EVault Plug-n-Protect is powered by EVault Software, a true disk-based backup and recovery product trusted by customers globally to protect their mission-critical systems and data. EVault Software uses an arsenal of end-to-end performance optimization techniques – such as bandwidth throttling, client-side delta-processing, compression, and deduplication – to accelerate backups, minimize the burden on source systems, and maintain a small storage footprint. All EVault Plug-n-Protect configurations come with your choice of EVault Agents and Plug-Ins, allowing you to protect any combination of platforms and applications. The solution offers protection for Windows, Novell NetWare, Linux, Sun Solaris, HP-UX, IBM AIX, IBM i, VMware, Microsoft SharePoint, Microsoft Exchange, Microsoft SQL Server, Microsoft Hyper-V, Microsoft Cluster Services, and Oracle.

Single Solution for System and Data Recovery

EVault Plug-n-Protect allows organizations to apply different recovery policies to different groups of data and systems. All configurations feature EVault System Restore, offering a quick and painless method for completely recovering a system after a catastrophic failure. EVault System Restore is an advanced bare metal recovery technology that enables you to quickly recover an unusable system. In just minutes, you can initiate recovery of a system onto similar hardware, dissimilar hardware, or a virtual machine. It can restore both the system and data in a single pass. You get a unified solution that eliminates the need for multiple backups and dramatically reduces downtime.

A Reliable and Efficient Storage System

EVault Plug-n-Protect takes advantage of Nexsan SATA storage systems that deliver uncompromising availability and reliability. Their advanced mechanical design provides superior cooling for optimal thermal operation, reduces drive vibration, and delivers outstanding energy efficiency in a high density form factor.

The storage systems also employ energy-saving AutoMAID™ technology. AutoMAID (Massive Array of Idle Disks) allows the systems to place their disk drives into an idle state to conserve energy, yet provide near-instantaneous access to data. This powerful combination of high reliability with energy-saving capabilities enables you to maximize the total return on your investment.

Specifications

EVault Plug-n-Protect is available in four configurations. For each configuration, you can choose which EVault Agents and EVault Plug-Ins you'd like to deploy.

	Entry	Standard	High-Capacity	High-Capacity Expansion Pack
<i>EVault Director</i>	EVault Director (Pre-Installed)	EVault Director (Pre-Installed)	EVault Director (Pre-Installed)	EVault Director (Pre-Installed)
<i>EVault Agents</i>	10 Agents	20 Agents	35 Agents	10 Agents
<i>EVault Plug-Ins</i>	5 Plug-Ins	10 Plug-Ins	15 Plug-Ins	5 Plug-Ins
<i>Companion Products</i>	1 license of EVault System Restore	5 licenses of EVault System Restore	10 licenses of EVault System Restore; 2 licenses of EVault Real Time Protection	1 license of EVault System Restore
<i>EVault CentralControl</i>	Included	Included	Included	Included
<i>Server</i>	1U Rack Server (Quad-Core)	1U Rack Server (Quad-Core)	1U Rack Server (Quad-Core)	1U Rack Server (Quad-Core)
<i>Storage System</i>	Nexsan SATABoy Storage System (3U; 14 drive bays)	Nexsan SATABoy Storage System (3U; 14 drive bays)	Nexsan SATABeast Storage System (4U; 42 drive bays)	
<i>Configured Storage Capacity</i>	6 TB Usable (8 x 1 TB Drives in RAID 5 configuration)	12 TB Usable (14 x 1 TB Drives in RAID 5 configuration)	12 TB Usable (14 x 1 TB Drives in RAID 5 configuration)	12 TB Usable (14 x 1 TB Drives)
<i>Max. Storage Capacity</i>	12 TB Usable	12 TB Usable	36 TB Usable	
<i>Hardware Support</i>	3-year Limited Warranty	3-year Limited Warranty	3-year Limited Warranty	3-year Limited Warranty
<i>Software Support</i>	1-year Support & Maintenance	1-year Support & Maintenance	3-year Support & Maintenance	3-year Support & Maintenance

UCG's VAULT400 provides Data Protection, Online Backup and Disaster Recovery Services to protect 10GB to 100TB of data by utilizing our SaaS Managed Service, Appliances (Plug-n-Protect) and Software Licensing Options.
