

VAULT400 Desktop

Simple, Online Backup and Recovery for Desktops & Laptops

VAULT400 Desktop provides online backup and recovery for PCs and laptops at large or small businesses. VAULT400 Desktop features innovative disk-to-disk technology designed to provide users with the functionality and price point that best suits their business.

VAULT400 Desktop technology can be utilized as an online backup and recovery service, leveraging existing infrastructure and Internet connections, to get data off-site to one of VAULT400's secure data centers. VAULT400 Desktop agents may also be licensed for those that need to fill a critical hole in data protection for larger businesses with remote offices, laptops and personal computers not always on a network.

Users have the option to encrypt the data stored on the storage vault using AES (Advanced Encryption Standard). Even if the encryption option is not selected, the data is still encrypted during transmission over the Internet to the electronic vault.

Perfect for the road warrior – If a scheduled backup has been missed because a user is offline or on the road, the agent can be configured to run automatically when a network connection is available.

VAULT400 technology has provided secure online data protection and recovery software and services to more than **8,000 customers** worldwide since 1997.

Key Benefits

State of the art encryption

Instant, off-site backup

Fully automated

Rapid recovery 24x7

No capital investment

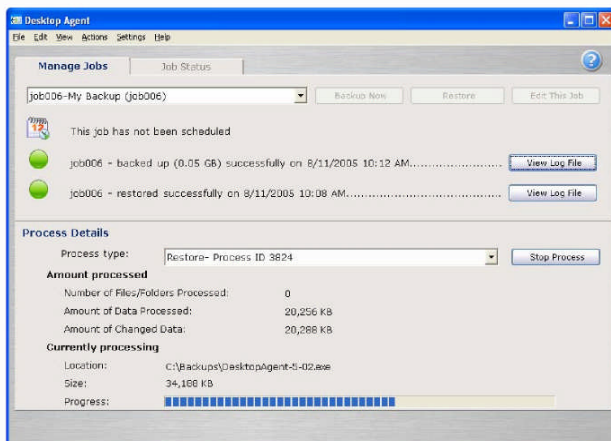

World-class customer service

North America
